Recycle Reuse Electrical Electronic

What are EPR Fees?

It means the financial contribution paid by a producer (manufacturer, converter, importer or brandowner), to a registered producer responsibility organization (PRO) for the management of the elimination of waste from the products it places on the market. EPR Fees are based on nett cost recovery of a product and is applied proportionally to all members based on the identified products placed on the market.

What are the EPR Fee options?

1. Flat fee application ie.: Total put on market weight x EPR Fee
2. Modulation application (based on the ease of recyclability) ie.: Difficult to recycle portion of put on market weight x EPR Fee

NB: The prerequisite for modulation is an extensive analysis of the product design and material composition

EPR Fees...

What do EPR Fees pay for?

- Recycling which includes collection, transport and treatment costs for separately collected waste
- Administration and operation of a PRO
- Audit and surveillance
- Building up collection's infrastructure within South Africa
- Develop and establish infrastructure for recycling and secondary markets
- Compensate waste reclaimers
- Support and promote small businesses and entrepreneurs with a special focus on women, youth and persons living with disabilities.
- Job creation
- Public communication and awareness-raising

Example

☐ Flat Fee option

Total POM Volumes = 10000 KGs

EPR Fee = R1.65

EPR Fee Calculation: $10000 \times 1.65 = R16500$

☐ Example – Modulation option

Total POM Volumes = 10000 KGs

Difficult to recycle portion = 60%

EPR Fee Volume = $10000 \times 60\% = 6000$ KGs

EPR Fee = R1.65

EPR Fee Calculation: $6000 \times 1.65 = R9900$
